DeepTsight Capability Statement

Precision and Innovation in Control Systems & Operational Technology

PRECISION · RESILIENCE · INSIGHT

Perth, Western Australia | 2026

ABOUT US

Engineering Clarity for Complex Industrial Systems

DeepTsight is a specialist Engineering and Technology Consultancy helping Critical Infrastructure and heavy-industry operators improve the performance, resilience and security of operational environments.

SEE Reveal technical risk, constraints and root causes.

CONNECT Align control, electrical, instrumentation and security decisions.

DELIVER Turn insight into practical, plant-aware engineering outcomes.

MISSION

Deliver premium, technology-driven engineering solutions that hold up in live industrial environments.

© 2026 DeepTsight Consulting Pty Ltd

CORE CAPABILITIES

Integrated Expertise Across Control, Field and Cyber Layers

Practical engineering capability shaped by complex brownfield, live-plant and critical-infrastructure environments.

01

Control Systems Engineering

PLC and DCS engineering, integration, upgrades, testing and commissioning.

02

Electrical & Instrumentation

Instrumentation design, E&I integration, field interfaces and plant modification support.

03

OT Governance & Asset Resilience

OT lifecycle governance, asset visibility, infrastructure modernisation, technical assurance and operational continuity planning.

04

OT Cybersecurity & ISA/IEC 62443

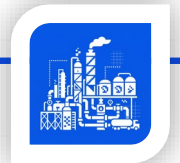

Risk assessment, IT/OT segregation, Level 3.5 DMZ architecture, vulnerability roadmaps and defensible compensating controls.

DeepTsight Consulting Pty Ltd

Experience Shaped in Demanding Operating Environments

2011

Oil and Gas Downstream

2016

Water Industry

Mining

2020

Remote Operations

Power and energy

2026

Instrumentation, Control & Commissioning

Brownfield integration planning, controls modification and staged commissioning of DCS, SCADA, safety systems, metering, rotating equipment and remote telemetry.

Control Systems & Automation

Secure PLC, SCADA and Telemetry architecture and implementation support preserving essential operational data flows.

OT Governance & Cyber Resilience

Lifecycle governance, technical oversight and operational continuity for critical assets.

Engineering & OT cybersecurity

Control engineering, OT risk, network segregation and ISA/IEC 62443-aligned advisory.

SECTOR EXPOSURE

LNG & Gas | Mining & Resources | Water Infrastructure | Power Generation | Critical Infrastructure

Experience includes work undertaken by DeepTsight personnel before the establishment of DeepTsight Consulting Pty Ltd.

© 2026 DeepTsight Consulting Pty Ltd

Qualified to Engineer, Govern and Secure Critical Systems

Professional registrations and specialist certifications spanning engineering, automation and industrial cybersecurity.

CHARTERED PROFESSIONAL ENGINEER

Engineers Australia

Professional engineering registration

CERTIFIED AUTOMATION PROFESSIONAL

International Society of Automation

Automation and control systems expertise

CYBERSECURITY EXPERT

International Society of Automation

Industrial automation and control systems security

IEC 62443 SPECIALIST BADGES

ACADEMIC FOUNDATION

Master of Engineering in Instrumentation, Control & Automation

Edith Cowan University, Perth

Credentials held by DeepTsight Principal Consultant.

HOW WE WORK

From Uncertainty to Confident Execution

A disciplined path that integrates operational context, engineering rigour and cyber resilience.

01

DISCOVER

Understand the asset, constraints and decision context.

02

DEFINE

Frame risk, requirements and practical options.

03

ENGINEER

Develop fit-for-purpose designs and implementation plans.

04

ASSURE

Verify readiness, quality, security and operational acceptance.

RELIABILITY

Protect plant availability and operational continuity.

COST OPTIMISATION

Prioritise practical investments and lifecycle value.

SPECIALIST DEPTH

Access premium expertise without unnecessary overhead.

Engineering and Cybersecurity Through the Project Lifecycle

One integrated service model for control systems, automation and OT cybersecurity, from early definition through sustained operations.

01 DEFINE

Strategy, requirements & risk

- Asset context and stakeholder needs
- Basis of design and performance requirements
- OT risk, criticality and compliance objectives

02 DESIGN

Architecture & detailed engineering

- Control, network and instrumentation design
- Zones, conduits and secure access concepts
- Specifications, drawings and implementation plans

03 DELIVER

Integration & implementation

- PLC, SCADA, HMI and telemetry engineering
- Configuration, hardening and system integration
- Vendor coordination and controlled deployment

04 ASSURE

Test, commission & hand over

- Design reviews and technical assurance
- FAT, SAT, verification and validation
- Commissioning, documentation and operational readiness

05 SUSTAIN

Operate, maintain & improve

- Lifecycle governance and asset visibility
- Change, patch, backup and access reviews
- Performance, resilience and security improvement

ENGAGE AT ANY PHASE

Independent advisory | Owner's engineering | Detailed design | Integration support | Assurance | Lifecycle governance

Every engagement is tailored to plant risk, operational constraints and the client's existing delivery model.

© 2026 DeepTsight Consulting Pty Ltd

LET’S BUILD RESILIENT INDUSTRIAL SYSTEMS

Engage DeepTsight for specialist control systems engineering, automation and OT cybersecurity services designed around real operational constraints.
